- 2025/2026 Student Intractive Society Member
- 2025/2026 Sport Council member

LANGUAGES

- Sinhala (Fluent)
- English (Fluent)

ACADEMIC PROJECTS

Design and Development of Antibacterial Diabetic Socks for Diabetic Patient

This project is about designing and developing diabetic socks for people with diabetes. The main goal is to reduce foot problems such as infections, pressure, and discomfort.

The socks are made using soft, breathable, and antibacterial materials to improve comfort and foot hygiene. This design helps protect the feet, improve blood circulation, and support daily use for diabetic patients.

American Streetwear - Upcycled Denim Collection

Conceptualized and executed a 6-look sustainable American streetwear collection for the TERRA Fashion Show 2026, organized by SLTC’s Fashion & Textile Department. Addressed textile waste by repurposing discarded denim into contemporary, runway-ready streetwear, combining distinct garment silhouettes with circular fashion principles.

Managed the end-to-end design and production process, including multi-shade denim patchwork, contrast paneling, utility layering, and custom industrial hardware integration (chains and rivets). Successfully presented the completed line on the live runway, demonstrating advanced garment reconstruction, styling, and functional craftsmanship.

LEADERSHIP

- Senior executive prefect in school
- Coordinator of Science Day at SLTC
- Content Lead and Community Organizer for “Mathaka” Film at SLTC
- Head of Community – Freshers at SLTC
- Netball Vice-Captain at SLTC
